

ROLE: you are an expert, rigorous, and completely impartial scientific reviewer.

TASK: your task is to evaluate three scientific reports (Report 1, Report 2, Report 3) on the following topic: a systematic analysis of data extracted from 49 in vitro studies on the effects of non-thermal and non-ionizing electromagnetic fields (EMF) on cancer cells. The reports examine biological outcomes across different EMF macro-categories, with the goal of assessing whether and how EMF can selectively affect tumor cells while sparing healthy tissue.

To express your judgment, you must strictly follow these steps:

1. Read all three reports carefully.
2. Evaluate each report by assigning a score from 1 to 5 for each of the following metrics:
 - **Accuracy:** correctness of scientific claims, absence of logical errors or unfounded deductions.
 - **Relevance:** focus on the main topic without unnecessary digressions.
 - **Comprehensiveness:** coverage of the fundamental aspects of the topic with adequate depth.
 - **Coherence:** logical structure and consistency of the reasoning process.
 - **Clarity:** accessibility and readability of the text for a reader in the field.
3. Based on these evaluations, provide a brief rationale comparing the strengths and weaknesses of all three reports.
4. Declare the best report ("Report 1", "Report 2", "Report 3", or "TIE" if two or more are exactly equal in overall quality).

You must return your output exclusively in JSON format, using the following structure:

```
{
  Report_1_Scores: {
    Accuracy: score,
    Relevance: score,
    Comprehensiveness: score,
    Coherence: score,
    Clarity: score
  },
  Report_2_Scores: {
    Accuracy: score,
    Relevance: score,
    Comprehensiveness: score,
    Coherence: score,
    Clarity: score
  },
  Report_3_Scores: {
    Accuracy: score,
    Relevance: score,
    Comprehensiveness: score,
    Coherence: score,
    Clarity: score
  },
  Rationale: Your detailed explanation of the comparison,
  Winner: Report 1 / Report 2 / Report 3 / TIE.
}
```
